

Superabsorbents

Superabsorbents are crosslinked, potassium based polymers specifically formulated and fully registered for use in soil erosion control and agriculture. Similar to a chain-linked fence, the polymers build on the strength of interwoven links. This bond offers high absorption under soil pressure, high gel strength, and lasts longer in soil than other competitive products. Our products also maintain their ability to retain water and nutrients when incorporated at a depth of 3-6 inches. The crystals feature elastic memory whereby once the plant drains the moisture from the gel, it returns to its crystal form. When it rains again, it swells back into its gel form. This rehydration cycle can continue up to five to seven years.

Principal Uses

- Ø Soil Erosion Control, Soil Cohesion
- Ø Sediment Bulking, Increases Solids Density
- Ø Suitable for a wide range of applications including commercial horticulture, landscaping, reforestation and land reclamation, sod and turf, plant transportation and storage, golf courses, and sports turf
- Ø Water Infiltration
- Ø Applied pre-plant or at planting, Superabsorbents hold moisture and nutrients in the root zone of plants.

Advantages

- Increases the ability of soil to hold water, minimizes erosion, and reduces nutrient leaching
- Fully registered in agriculture applications
- Reduces costs of irrigation
- Increases intervals between irrigations
- Crop flexibility and application flexibility
- Potassium-based structure will not add unwanted salinity levels to the soil
- Environmentally sound
- Neutral pH
- Breakdown component parts of ammonia, carbon dioxide, and water
- No residual toxicity

Handling & Storage

Superabsorbents must be kept dry!! Direct contact with moisture creates problems above the soil surface. Store the product in a cool, dry place until application. Many products in the Superabsorbent series should not be used with liquid fertilizers. They are classified as mild irritants, so gloves and protective eyewear should be worn. Nose and mouth protection are also recommended. Do not let unused product sit overnight, because high humidity and seepage could activate the product.

Shipping

Superabsorbent products are available in 50-lb bags.

Application

Fill tank with liquid fertilizer (if appropriate) and slowly add Superabsorbent. Do Not Add Water!! Agitate to keep mixture in suspension. Apply product using a 1/16" I.D. tube directly behind the opener.
